COMMENT

4 Extract & Tag

Output format is whatever you set under Settings → extract format (default lossless FLAC). Platinum Notes should use **Match input format** so the _PN file matches that extension.

- [ ] Normalise audio (EBU R128 — target LUFS from Settings)
- [x] Move source video file to Bin after extraction
- [ ] Open extracted file in Platinum Notes (requires app name in Settings)
- [ ] Watch for Platinum Notes output and re-apply tags & artwork automatically (polls up to 3 min)
